3. Essay Writing

The Covid-19 pandemic has been a catalyst for an application of the technology in fields of education. Blockades on schools sparked off an execution of online classes in higher frequencies, with development of innovational technologies such as real-time video chatting. Utilization of the technologies not only persisted education during the pandemic, but also brought on several benefits. In my preference, though, educational shortcomings there are, even more than the advantages, compared to getting educated in traditional schools. I support such view for educational, social, and health related reasons.

First of all, traditional schools are more proximity to favorable conditions for educations. The evident difference between online and offline education is the presence of teacher's supervision. Teachers and students share one space together, enabling the teachers to keep eye on every action of students, and hear every unnecessary sounds. In addition, less factors will hinder students' preoccupation on academic activities in real schools than in online schools. A number of choices are possible for those getting online education as substitutes for studying, such as playing game, watching Youtube, lying on a bed, etc. On the other hand, students listening to teachers' lectures in classrooms can only chat, sleep, or focus.

Second of all, students are given opportunities to gain social experiences by going to school. School will function as a small society, where students will learn how to survive from complicated relations, and make wise choices to sustain their relationships. Students will develop their speaking abilities by communicating with classmates, and understand the hierarchical system of the society by handling relationships with seniors or teachers. Furthermore, they will sometimes encounter conflicts with others, an opportunity to enhance their skills to cope with strife between people.

Lastly, traditional schools also influence positively on students' overall health and activeness. They basically got numerous chances to move during the school time. For example, they get to run to a cafeteria during lunch time, move to the science lab during science time, and sometimes have a walk in the hallway with their friends during breaktime. Moreover, school schedule is planned to contain at least an hour of P.E class, keeping students' consistent physical activities, and encouraging the habituation of exercising.

Briefly, traditional schools seem to provide more educational advantages to

students than teaching in online. Considering the efficiency of education, government must make the field of education to be unencumbered by the facet of the pandemic.
