Possessing different features and have inhabited in different ecosystems, each plant species are providing numerous, distinctive advantages to human beings. For instance, they gratify humans' desire by functioning as a well-suited source of food, medicine, constructive materials, and many other necessities. As far as I am concerned, maple tree would be the most helpful plant type in my country, among a number of beneficial vegetations, owing to geological, aesthetic, and biological basis.

First and foremost, maple trees make large contributions in preventing landslides. In reality, mountains account for over 70% of the land surface. To make matters worse, mountains get to encounter prolonged rainfalls during the summer solstice. Continuous accumulation of water in the mountains weakens the soil layer. These unfavorable conditions are grounds for higher risks of landslides. However, maple trees, one of the most plentiful tree types in mountains, prevent the catastrophe by absorbing overflowing water, and strengthening the soil layer with their deeply growing roots.

Second of all, maple trees have a power to gift a spectacular view to humans. Every Autumn season, a number of mountains are covered with a wave of orange and red colors. This is resulted from the leaf color alteration of maple trees, and they usually be a stimulus of people's emotions and sensitivities. For example, staring the leaves make people reminisce about their memories, or sometimes long for their past lovers. The colorful view also provides one of the best places to take pictures and movie scenes.

Lastly, maple trees are sources of maple syrup, one of the most beloved sauce along with chocolate or strawberry syrup. Its high sugar content facilitate itself to be used not only for eating with pancakes, but also for sweetening teas. In addition, maple syrup is well-known for its positive effect on people's health. It's so high in health efficacy that the effectiveness is occasionally compared equally to the honey.

In overall, maple trees have been playing essential roles in lives of people in my country, in facets of safety, landscape, and health. Nowadays, deforestations are in progress in an attempt to supplement woods. However, they must consider the prolonged advantages as a priority rather than the instantaneous advantages.
